

Antonio Colagreco

Frontend Developer

Skilled and passionate frontend developer specializing in React, Next.js, and Gatsby. Creating intuitive and responsive user interfaces is my expertise. I leverage modern technologies to deliver high-quality web solutions that enhance usability and user experience. Proficient in Next.js, I can seamlessly integrate server-side rendering and API functionality to build robust and dynamic web applications.

Education

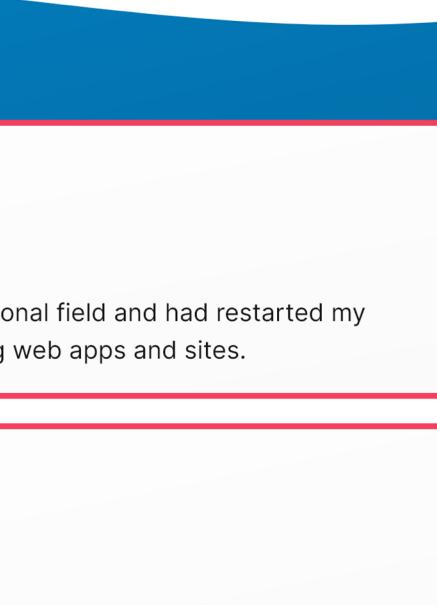

Computer Science Technician
ITIS Luigi Di Savoia, Chieti (CH)

Recent Projects

adkaora.com

I built this website from scratch as a solo project using Gatsby and React, following the design provided by the company. The site's content is managed through a headless CMS, Contentful. To ensure compliance with regulations, I implemented Lubenda, a comprehensive solution for legal compliance. For user authentication, Amazon Cognito was utilized, providing secure and seamless login functionality. Additionally, Google Analytics was integrated to provide detailed analytics and insights.

a2aenergia.eu

Through a collaboration with hinto.com, I developed numerous frontend components for the website using Gatsby and React. This project involved a team of several individuals, and we utilized Figma and Jira for seamless collaboration. The result is a visually appealing and highly functional website that showcases the expertise and dedication of the team.

Work Experience

Frontend Developer

Freelance

2021 — present

While working as a sales associate, I had long decided to return to my initial professional field and had restarted my training journey through various courses on Udemy. And here we are now, developing web apps and sites.

E-Commerce Specialist

CheAutoRicambi SRL (Family Business)

2012 — 2021

My role was to sell spare parts mainly on eBay.it and Subito.it. My primary responsibilities included creating and managing listings, as well as coordinating logistics for shipments. Another important aspect of my role was customer management and I was also responsible for administrative tasks and accounting.

Fullstack Developer

RARA System SRL

2008 — 2011

As a full-stack developer, I was responsible for developing web applications using the MVC pattern for clients in the public and banking sectors. One of my notable contributions was assisting in the creation of Information Kiosks for scheduling medical appointments within hospitals. Additionally, I played a crucial role in developing the company's in-house framework used for building all web applications. During this experience, I primarily worked with Java Server Faces, Spring and RichFaces.

Founder

ITS di Antonio Colagreco

2005 — 2007

Computers and components retailer providing professional assembly and technical support services. The company's expertise also extended to installing and configuring small-scale business networks.
